**Species (Family)**
(i) *Guaiacum officinale* L. (Zygophyllaceae)
(ii) *Guaiacum sanctum* L.

**Synonym(s)**
Guaiac, Guajacum, Lignum Vitae

**Part(s) Used**
Resin obtained from the heartwood

**Pharmacopoeial and Other Monographs**
- BHC 1992\(^6\)
- BHP 1996\(^9\)
- Complete German Commission E\(^3\)
- Martindale 32nd edition\(^43\)
- PDR for Herbal Medicines 2nd edition\(^36\)

**Legal Category (Licensed Products)**
GSL\(^37\)

**Constituents**\(^6,48,64\)
- *Resins* 15–20%. Guaiaretic acid, dehydroguaiaretic acid, guaiacin, isoguaiacin, *α*-guaiaconic acid (lignans), furoguaiacin and its monomethyl ether, furoguaiacidin, tetrahydrofuroguaiacin-A and tetrahydrofuroguaiacin-B (furano-lignans), furoguaiaoxidin (enedione lignan).\(^1–4\)
- *Steroids* β-Sitosterol.
- *Terpenoids* Saponins, oleanolic acid.\(^5,6\)

**Food Use**
Guaiacum is listed by the Council of Europe as a natural source of food flavouring (category N2). This category indicates that guaiacum can be added to foodstuffs in small quantities, with a possible limitation of an active principle (as yet unspecified) in the final product.\(^16\)

**Herbal Use**
Guaiacum is stated to possess antirheumatic, anti-inflammatory, diuretic, mild laxative and diaphoretic properties. Traditionally, it has been used for sub-acute rheumatism, prophylaxis against gout, and specifically for chronic rheumatism and rheumatoid arthritis.\(^6,7,8,64\)

**Dosage**
- *Dried wood* 1–2 g or by decoction three times daily.\(^6,7\)
- *Liquid extract* 1–2 mL (1:1 in 80% alcohol) three times daily.\(^6,7\)
- *Tincture of Guaiacum* (BPC 1934) 2–4 mL.

**Pharmacological Actions**

**In vitro and animal studies**
None documented. Antimicrobial properties are associated with lignans and much has been documented for nordihydroguaiaretic acid, the principal lignan constituent in chaparral (see Chaparral).

**Side-effects, Toxicity**
Guaiacum resin has been reported to cause contact dermatitis.\(^51\) The resin is documented to be of low toxicity; the oral LD\(_{50}\) in rats is greater than 5 g/kg body weight.\(^48\)

**Contra-indications, Warnings**
It is recommended that guaiacum is avoided by individuals with hypersensitive, allergic or acute inflammatory conditions.\(^49\)

**Pregnancy and lactation**
The safety of guaiacum during pregnancy has not been established. In view of this, and the overall lack of pharmacological and toxicological data, the use of guaiacum during pregnancy and lactation should be avoided.

**Pharmaceutical Comment**
Guaiacum is characterised by the resin fraction of the heartwood and much has been documented on the constituents (principally lignans) of the resin, although little is known regarding other constituents. No scientific information was found to justify
the herbal use of guaiacum as an antirheumatic or anti-inflammatory agent. In view of the lack of toxicity data, excessive use of guaiacum should be avoided.
